

CASE STUDY

Southdown Nursing Home, Swindon

Product Supplied: JCW Deck 34 & JCW Deck 19

JCW Acoustic Supplies supplied 350m2 of Deck 34 & Deck 19 via Marlborough Building Supplies.

The contractor took on the job of converting this old nursing home in to 8 flats with the added challenge of the front of the building which was listed so had planning restrictions, however the back was an extension so was a bit easier regards the conversion. JCW worked with the acoustician Richard Sharland from Ian Sharland Ltd, who carried out a pre-test to see how the building performed acoustically as it stood. Once the results were in it was decided that the JCW Deck 34 would work for the listed part of the building and JCW Deck 19 would work for the rest which also prevented having to alter the head heights too much.

JCW delivered all product direct to site within the given time frame and the contractors were happy with the results.
