

CASE STUDY

St Andrews School, Woking, Surrey

Product installed: JCW Acoustic Hanging Baffles and Reflecta Sound Wall Panels

JCW Acoustic Supplies Ltd were delighted to help St Andrews School in making their school dining hall a pleasant place to sit again after suffering highly reverberant sound making it difficult to enjoy their lunch.

SCHOOL • WOKING JCW Acoustic Supplies Ltd offered St Andrews advice on how to change this dining hall problem, by looking at the reverberation times and with a quick calculation and by following the BB93 guidelines were able provide the school with a quotation on installing 36m² of absorption panels within the room. Utilising the ceilings and the walls due to the available space we had to work with we were able to reduce the 'echo' sound that the school were encountering.

As JCW Acoustic Supplies Ltd can offer bespoke sizes of panels in different colours, we used different sizes of panels to suit the required amount of absorption needed and our expert installation team had no problem fitting these in over a two day period.

Mr Alastair Law, Bursar for St Andrews wrote to JCW saying that the staff had said *'it's lovely to be able to hear what the children are saying at lunchtime - before it was just noise. This was always the noisiest of the two dining rooms now it is the quietest'*. Mr Law also commented that *'the work was done on time and on budget and the installers were on time and left everything looking good'*.

If you have a problem with reverberating dining halls in your school, please call JCW on 01204 548400 and let us help you.
