

CASE STUDY

Home Improvement - Surrey

Product installed: JCW Acoustic Reflecta Sound Wall Panels

JCW Acoustic Supplies Ltd were pleased to help one of our lovely domestic customers who contacted us via our website. JCW needed to calculate the reverberation times within the kitchen and dining area so that we could help to work out how many panels were required.

Kitchen/Dining Area - Before

After deciphering how many square metres were needed we then needed to look at the available space we had for panels and help with a design layout to not only help absorb the echo but to also look aesthetically pleasing.

The JCW team took their time to talk with the customer and helped them to envisage how the panels would look without even installing a panel and after sending samples to the customer of colours and panel make up and with the approval of our customer, the installation team were ready to help fit the panels over a two day period.
