

CASE STUDY

JCW Acoustic Supplies

May & June 2009

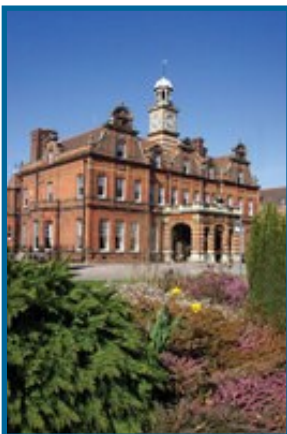

Fellowes Plain, Norwich

The project involved the design and construction of 271 residential apartments on the site of the former Norfolk and Norwich Hospital on St Stephens Road, in the heart of Norwich, mixing new build with the skills of conservation. The Grade II Listed masonry towers had to be retained and integrated into the new development. The listed three storey central administration block was also refurbished and converted into a further 19 executive apartments.

Details:

- The 19th Century hospital buildings were sympathetically converted.
- The developments range in height up to eight storeys.
- They feature a mixture of undercroft and multi-storey underground car parking.
- The scheme provides properties from single-bed apartments to penthouses.
- The new build elements of the development have taken full advantage of modern construction techniques such as tunnel form, along with off-site prefabricated bathroom pods.
